Paper 2: Application of Computational Thinking

You must have:

Pseudocode command set (enclosed)

Total Marks

--

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Use of a calculator is **prohibited**.

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

Answer ALL questions. Write your answers in the spaces provided.

Questions in this paper are based on a scenario.

Margaret's Ice Cream Kiosk

Margaret runs an ice cream kiosk in a seaside town. She makes and sells ice cream. She also sells sweets, hot and cold drinks, and cookies.

- 1 Margaret has developed her own recipes for different flavours of ice cream. The recipes use only natural ingredients.

Here is Margaret's recipe for strawberry ice cream.

Margaret's Ice Cream Kiosk Strawberry ice cream ingredients

0.8 litres - Full fat milk
0.9 litres - Cream
0.3 kilograms - Sugar
12 Whole eggs
1.4 kilograms - Strawberries
15 millilitres - Vanilla

She stores all her recipes on a computer. One variable is needed to hold the amount of fruit and another is needed to hold the number of eggs.

- (a) State **two** additional variables that need to be created to store the recipes for ice cream.

(2)

1

2

- (b) State the data type needed to store values for the weight of fruit and the number of eggs in a recipe.

(2)

Weight of fruit

.....

Number of eggs

.....

(c) The process for making a single batch of ice cream is shown in the table.

Action	Time in minutes
Pre-freeze the ice cream maker	10
Add ingredients	5
Churn the ingredients into ice cream	30
Transfer the ice cream to tubs	5
Clean the machine	15

The ice cream maker must be sterilised at the end of each day. This takes 20 minutes.

Construct a general expression to show how many batches of ice cream can be made in any number of hours.

(2)

.....

.....

.....

.....

2 When stocks of items sold in the kiosk are low, they are reordered from the supplier. Any items that have passed their sell-by date are disposed of.

(a) A computer program can be used to determine when to dispose of or reorder cookies.

Complete the table to show an input, a process and an output, using the following information:

- each pack of cookies has a sell-by date
- there must always be at least 10 packs of each type of cookie in stock
- quantity ordered must bring the number of packs of each type up to 10.

(3)

Input	Process	Output
	Determine if the sell-by date is passed	Yes, dispose of pack of cookies No, keep pack of cookies
Number of packs of this type of cookie	Determine if number of packs < 10	
Number of packs of this type of cookie to reorder		Reorder this number of packs of this type of cookie

(b) Data about each item is encoded into text and is stored by a computer program as data type STRING. The format is the same for every item (DD MMM YYYY).

The data for chocolate chip cookie is shown.

L6041 8653 14 NOV 2019 L1017

Indexing is used to reference each location in the string.

State the indexing expression for the first character and the last character of the sell-by date.

(3)

First character

.....

Last character

.....

(c) The pseudocode for an infinite loop is shown.

```
2 WHILE (True) DO
3     SET count TO count + 1
4     SEND count TO DISPLAY
5 END WHILE
```

(i) Identify the pseudocode that makes this an infinite loop.

(1)

.....

.....

(ii) State how the user would stop this code running when it is executing on a computer.

(1)

.....

.....

(Total for Question 2 = 8 marks)

3 Margaret needs to know when to open the ice cream kiosk.

The pseudocode for an algorithm that determines opening times is shown.

The values for *month* are 1 = January, 2 = February ... 12 = December.

The values for *day* are 1 = Monday, 2 = Tuesday ... 7 = Sunday.

```
2 IF (month = 1) THEN
3     SEND ("Do not open") TO DISPLAY
4 ELSE
5     IF (month >= 5) AND (month <= 9) THEN
6         IF (day >= 1) AND (day <= 5) THEN
7             SEND ("12:00 to 18:30") TO DISPLAY
8         ELSE
9             IF (day = 6) OR (day = 7) THEN
10                SEND ("12:00 to 20:00") TO DISPLAY
11            ELSE
12                SEND ("High season day error") TO DISPLAY
13            END IF
14        END IF
15    ELSE
16        IF (month >= 2) AND (month <= 12) THEN
17            IF (day >= 1) AND (day <= 5) THEN
18                SEND ("13:00 to 17:00") TO DISPLAY
19            ELSE
20                IF (day = 6) OR (day = 7) THEN
21                    SEND ("13:00 to 18:00") TO DISPLAY
22                ELSE
23                    SEND ("Low season day error") TO DISPLAY
24                END IF
25            END IF
26        ELSE
27            SEND ("Month error") TO DISPLAY
28        END IF
29    END IF
30 END IF
```

6 Margaret uses a program to help her determine the selling price for each batch of ice cream based on the production cost, profit and tax.

(a) The pseudocode for an algorithm to calculate the selling price of ice cream is shown. The items TAX and PROFIT are constants.

```
2  CONST REAL TAX
3  SET TAX TO 0.20
4  CONST REAL PROFIT
5  SET PROFIT TO 0.06
6
7  SEND "Welcome to the selling price calculator" TO DISPLAY
8  # input the production cost
9  SEND "Enter production cost:" TO DISPLAY
10 RECEIVE costProd FROM (REAL) KEYBOARD
11
12 # add 6% to production cost
13 SET profit TO PROFIT * costProd
14
15 # add 20% tax to total cost
16 SET tax TO TAX * (costProd + profit)
17
18 # calculate total selling price
19 SET sellingPrice TO costProd + tax + profit
20
21 # print total cost, production cost, profit, tax
22 SEND "Your calculation is shown below" TO DISPLAY
23 SEND "Price: " & sellingPrice TO DISPLAY
24 SEND "Production: " & costProd TO DISPLAY
25 SEND "Profit: " & profit TO DISPLAY
26 SEND "Tax: " & tax TO DISPLAY
```

Explain why it is good programming practice to define values as constants, rather than as fixed values in the code.

(2)

.....

.....

.....

.....

- (b) The partially completed pseudocode for a different algorithm to calculate the selling price of ice cream is shown. It uses a subprogram.

```
6 SET message TO "Welcome to the selling price calculator"
7
8 _____ calcProfitAndTax ( _____ )
9 BEGIN _____
10     SET message TO "Your calculation is shown below"
11     # add profit to production cost
12     SET profit TO inProfit * inProd
13
14     # add tax to total cost
15     SET tax TO inTax * (inProd + profit)
16
17     # calculate total selling price
18     SET sellingPrice TO inProd + tax + profit
19
20     # print total cost, production cost, profit, tax
21     SEND message TO DISPLAY
22     SEND "Price: " & sellingPrice TO DISPLAY
23     SEND "Production: " & inProd TO DISPLAY
24     SEND "Profit: " & profit TO DISPLAY
25     SEND "Tax: " & tax TO DISPLAY
26 END _____
27
28 SEND message TO DISPLAY
29 # input the production cost, required profit, and tax rate
30 SEND "Enter production cost:" TO DISPLAY
31 RECEIVE costProd FROM (REAL) KEYBOARD
32 SEND "Enter required profit:" TO DISPLAY
33 RECEIVE reqProfit FROM (REAL) KEYBOARD
34 SEND "Enter tax rate:" TO DISPLAY
35 RECEIVE rateTax FROM (REAL) KEYBOARD
36 _____
37
```

Test 2		

(Total for Question 6 = 12 marks)

- 7 Margaret has introduced a loyalty scheme for the ice cream kiosk customers.
- (a) Each month, Margaret emails a statement to the loyalty scheme members. An example statement is shown.

Member Number: 987654

Dear Tom,

You have made 123 visits to the ice cream kiosk. You have spent £246.31. You have collected 210 points in total and have redeemed 75 points. Your current balance is 135 points.

Thank you for visiting Margaret's Ice Cream Kiosk.

Draw a diagram of a data structure suitable for storing this data. Include data for at least **two** members of the loyalty scheme.

(3)

(b) Margaret wants to send out vouchers to every member of the loyalty scheme. A logical looping construct is needed in the programming code to make this happen.

State the most appropriate type of loop and justify your choice.

(2)

(c) An algorithm that displays information about the number of members in the loyalty scheme is shown.

The use of multiple selection statements in this algorithm is inefficient.

```
2 SET numMembers TO 300
3
4 IF (numMembers >= 100) THEN
5     SEND "100+" TO DISPLAY
6 END IF
7 IF (numMembers >= 50) AND (numMembers <= 99) THEN
8     SEND "50-99" TO DISPLAY
9 END IF
10 IF (numMembers >= 25) AND (numMembers <= 49) THEN
11     SEND "25-49" TO DISPLAY
12 END IF
13 IF (numMembers < 25) THEN
14     SEND "Less than 25" TO DISPLAY
15 END IF
```

Explain how the algorithm should be amended to address this inefficiency.

9 The ice cream kiosk has a set of freezers for storing ice cream. If a freezer malfunctions, then Margaret needs to be informed.

- The perfect temperature for storing ice cream is -18°C .
- A permissible temperature tolerance is plus or minus one degree Celsius.
- An output message must be displayed to show the number and temperature of any freezer falling outside tolerance.
- The output message for each freezer must be on a single line.
- No other messages should be displayed.
- A global data structure holding the temperatures is provided and must be used as part of the solution.

SET freezers TO [-20, -19, -18, -17, -16, 0, 1]

- The solution should work even if the number of freezers in the data structure is changed.

An example output is shown.

```
Freezer 0 is out of tolerance: -20
Freezer 4 is out of tolerance: -16
Freezer 5 is out of tolerance: 0
Freezer 6 is out of tolerance: 1
